

Internship Cohort

Python Development Task List

About Us

- Sysslan IT Solutions is a leading technology firm recognized for its proficiency in the rapidly evolving domains of cloud computing, blockchain, artificial intelligence (AI), and machine learning (ML).
- The company is dedicated to delivering high-impact projects and customized solutions that address the dynamic requirements of modern businesses.
- Sysslan IT Solutions provides a comprehensive range of products and services, including scalable cloud computing platforms, cutting-edge blockchain solutions, intelligent AI systems, and advanced ML algorithms, designed to empower organizations and drive innovation.

Sysslan IT Solutions

Instructions

- Update your LinkedIn profile to highlight your accomplishments, such as offer letters or internship certificates from Sysslan IT Solutions. Mention and tag Sysslan IT Solutions in your posts. Use relevant hashtags like **#SysslanITSolutions** **#SysslanExperience** **#FutureWithSysslan** to showcase your professional association.
- Ensure that all work is original and avoid plagiarism or code duplication, as such violations may result in termination of the internship and impact future opportunities with Sysslan IT Solutions.
- Create a video presentation of your completed tasks and share it on LinkedIn. Tag Sysslan IT Solutions and use hashtags like **#SysslanInnovation** **#SysslanITSolutions** **#SysslanProjects** to engage with our professional community.

Sysslan IT Solutions

SUBMISSION

- Create a professional video highlighting your internship projects and accomplishments.
- Share the video on LinkedIn to demonstrate your work and build credibility with your professional network. Make sure to tag Syssslان IT Solutions in your post so the company is notified of your achievements.
- A submission form will be provided later. In the meantime, continue working on your tasks and maintain separate files for each level of work.
- When posting the video on LinkedIn, use the following hashtags to increase visibility and engagement:
 - **#SyssslانITSolutions #Syssslان #SyssslانProjects**
- You can also include additional hashtags relevant to your specific internship domain to further showcase your expertise.

Title: Python Programming & Automation Internship Project

Project Overview

This internship project is designed to build a strong foundation in Python programming through progressive, hands-on tasks. Starting from basic logic and structured thinking, the project advances toward file handling, automation, and simple real-world utilities. Each level focuses on practical problem-solving and clean coding practices commonly expected from entry-level Python developers.

Key Objectives:

- **Strengthen Python logic and syntax**
- **Understand structured output and data handling**
- **Learn file operations and automation basics**
- **Gain exposure to real-world Python use cases**
- **Build confidence in writing clean, readable programs**

Sysslan IT Solutions

Level 1 – Basic Logic & Structured Thinking

Description:

This level focuses on developing logical thinking and understanding Python basics such as loops, conditions, and structured output.

Tasks:

- Task 1: Display a simple 3×3 number grid using Python
- Task 2: Check whether a given number exists in the predefined grid
- Task 3: Calculate and display the sum of each row in the grid
- Task 4: Verify whether all numbers in the grid are unique

Skills Gained:

Python basics, loops, conditional logic, formatted output

Level 2 – Core Python Programs

Description:

This level introduces small yet useful Python utilities that improve string handling, logic building, and program structure.

Tasks:

- **Task 1: Validate an email address using basic rules**
- **Task 2: Generate a random password with letters and numbers**
- **Task 3: Analyze text to count total characters and words**
- **Task 4: Generate the Fibonacci sequence up to a given number of terms**

Skills Gained:

String manipulation, functions, random module usage, logical flow

Level 3 – File Handling & Simple Automation

Description:

This level introduces file handling concepts and basic automation techniques used in real applications.

Tasks:

- Task 1: Create a simple record management system using lists or dictionaries
- Task 2: Save and retrieve records using file-based storage
- Task 3: Read and display file content line by line safely
- Task 4: Create a log file system with date and time entries

Skills Gained:

File I/O operations, data persistence, dictionaries, logging basics

Level 4 – Beginner Automation & Data Handling

Description:

This level focuses on automating everyday tasks and handling structured data.

Tasks:

- Task 1: Organize files automatically based on file types
- Task 2: Generate student reports from stored marks and names
- Task 3: Build a daily task list manager with file saving
- Task 4: Read numerical data from a file and display total, average, and maximum

Skills Gained:

Automation scripting, data processing, report generation, file management

Sysslan IT Solutions

Level 5 – Intro to Real-World Python Projects

Description:

This level introduces practical Python use cases commonly seen in real-world projects.

Tasks:

- Task 1: Perform basic web scraping using BeautifulSoup
- Task 2: Read and display CSV data in a readable format
- Task 3: Create an automated backup script for folders
- Task 4: Develop a mini personal utility tool combining logic and file handling

Skills Gained:

Web scraping basics, CSV handling, automation scripts, mini project development
